SHEKH EHSANUR RAHMAN

Senior Flutter Engineer | Native iOS · Android · macOS

Offline-first sync · Payments & subscriptions · Custom plugins & native integration · Release automation

mail@ehsanur.com · +880 1747-931646 (WhatsApp) · ehsanur.com · linkedin.com/in/sujit70777 · github.com/sujit70777 · pub.dev/publishers/ehsanur.com

Remote from Bangladesh (UTC+6) · **No relocation or visa sponsorship required** · Full-time or contract · Works with any time zone · **Available now**

SUMMARY

Senior Flutter Engineer with 11 years of shipping mobile apps (7 of them in Flutter) — 50+ apps worked on, 1M+ combined users — and the native depth to go below the framework in Swift, Kotlin and Java. I fix the problems that block a product: offline data that must not be lost, payments that must reconcile across Apple and Stripe, platform edge cases, and slow components that need a native rewrite. Team lead of 6 developers; 9 Flutter packages on pub.dev; two products of my own live on the Mac App Store and Google Play.

KEY RESULTS

- **~1 month** to App Store launch for a subscription app stalled ~2 years
- **2 apps past 100,000 downloads** each, built offline-first
- **~0.5 s** per scan after replacing a Flutter scanner with a native one
- **10–20 min** releases, down from ~1 hour (Fastlane + GitHub Actions)

EXPERIENCE

Independent Mobile Engineer — Hourwise Labs (own products)

09/2026 – Present · Remote · Mac App Store · Google Play

- Shipped two products solo between roles; available for full-time or contract work now.
- **Hourwise** — native macOS menu-bar app that records billable work for solo lawyers and turns it into invoices; an on-device naive-Bayes classifier assigns work to client matters so data never leaves the Mac. SwiftUI + AppKit, SQLite/GRDB, StoreKit 2, LEDES/QuickBooks/Xero exports.
- **Repha** — Flutter app connecting Bangladeshi pharmacies with pharma companies' medical reps: one order list split by company and routed to the right rep; 70,000+ medicines searchable offline (SQLite FTS5); photo-to-order on-device OCR; Laravel + MySQL backend and admin panel at zero hosting cost; pilot in Rajshahi.

Senior Mobile Developer (Level III) · Mobile Team Lead — Developer eXperience Hub (Devxhub)

09/2023 – 09/2026 · Remote — Rajshahi, Bangladesh

- **Mobile team lead:** hired and onboarded the mobile developers, mentored them through code review and pairing, and was accountable for every team member's work.
- **Process:** ran sprint planning and owned every mobile release; worked directly with product managers and designers on scope, user flows and UX; owned architecture and state management in Flutter with native Swift and Kotlin modules across FinTech, subscription, marketplace and consumer apps.
- **Payments:** unified Stripe and Apple In-App Purchase into one account-level entitlement model — App Store launch ~1 month after ~2 years stalled (case study below).
- **Native scanner:** rewrote a slow Flutter scanner natively — ~0.5 s per code (case study below).
- **Offline-first sync** for expense and FinTech apps serving 50,000+ users: one deterministic conflict-resolution rule across devices; claims made without signal sync when the connection returns.
- **Prayer-time engine:** fixed wrong times at high latitudes with a new offline calculation engine for 30+ countries; open-sourced on pub.dev.
- **Delivery:** Fastlane + GitHub Actions cut releases from ~1 hour to 10–20 minutes; introduced Claude Code to the team with code review and tests required on every merge.

Founder & Lead Mobile Developer — Prabartan Information Technology (own company)

06/2019 – 08/2023 · Rajshahi, Bangladesh · EdTech app studio

- Founded and ran an EdTech app studio; hired and led a 6-developer team building offline-first, multi-language learning apps for students on weak internet; two apps passed 100,000 downloads each (case study below).
- Modernized the stack (Flutter 3, Jetpack Compose, SwiftUI) and set code review standards for the team.

Android Application Developer — Blue Hills Information Technology

07/2015 – 05/2019 · On-site — Rajshahi, Bangladesh · Part-time alongside university through 04/2017

- Co-built consumer Android apps in Java and Kotlin that reached 500,000+ downloads and a top-10 Education ranking on Google Play.

Guest Trainer, Mobile App Development (Contract) — NACTAR

2016 – 2024 · 2–3 sessions a year · Bogura, Bangladesh

- Designed and delivered hands-on Android and Flutter training to 200+ developers.

CASE STUDIES

Cross-Platform Payment Entitlements — Subscription App · *Flutter · StoreKit 2 · Apple In-App Purchase · Stripe · backend* · App Store · Google Play

- **Problem:** Android paid through Stripe and iOS through Apple In-App Purchase, and the two disagreed: duplicate purchases, upgrades billed in full, access on the wrong account. The app had been in development for ~2 years.
- **Decision:** as team lead, with the backend developer, made one account-level entitlement on the backend the single source of truth for both payment systems — Apple ties purchases to the Apple ID while the business sells to app accounts; added duplicate-purchase checks and reconciled existing records.
- **Result:** App Store approval and launch ~1 month after stabilization began.

Native Receipt Scanner — Expense-Reimbursement FinTech · *Flutter · Swift · Java · WebSockets* · pub.dev package

- **Problem:** employees were reimbursed by scanning receipt QR codes and barcodes; the generic Flutter scanner was too slow and couldn't be customized, and verification showed only an endless spinner.
- **Decision:** rewrote scanning natively (Swift on iOS, Java on Android) behind a Flutter interface for direct control of the camera; streamed verification progress over WebSockets; claims save offline and sync later.
- **Result:** ~0.5 s per code; a reimbursement completes ~5–10 s after the scan. Open-sourced as a Flutter package (the company has since closed).

Offline-First Learning Apps — EdTech · *Flutter · Firebase · SQLite · multi-language* · Google Play

- **Problem:** students on weak or no internet lost lessons and progress whenever the network dropped.
- **Decision:** made the device the source of truth — lessons and progress stored locally first — with a Firebase/SQLite sync layer and deterministic conflict resolution.
- **Result:** two of the apps each passed 100,000 downloads on Google Play.

Also shipped (iOS and Android): prayer-times app (App Store · Google Play), multi-service super app (App Store · Google Play), e-commerce marketplace (App Store · Google Play), secure video-course platform (App Store · Google Play), notes and task planner (App Store · Google Play), eSIM data-plan marketplace (Google Play).

OPEN SOURCE

9 Flutter packages on pub.dev (verified publisher): flutter_crdt_sync_kit (CRDT merge of offline edits across devices), local_voice (on-device voice commands), flutter_a11y_lens (live WCAG auditing), flutter_scanner_devxhub and flutter_prayer_time_calculator (from client work), plus four more. On GitHub: OMR answer-sheet scanner (homography), ar_measure (ARKit/ARCore plugin).

SKILLS

Mobile: Flutter & Dart (7 yrs) · Swift, SwiftUI, AppKit · Kotlin, Java, Jetpack Compose · platform channels and custom plugins · home-screen widgets (WidgetKit, App Groups) · multi-flavor builds

Architecture: Clean Architecture · BLoC/Cubit · Riverpod · MVVM · dependency injection · repository pattern

Data & sync: offline-first / local-first · CRDT and conflict resolution · SQLite (Drift, GRDB, FTS5) · Firebase · Supabase · REST · WebSockets · Laravel + MySQL APIs

Payments: StoreKit 2 · Apple In-App Purchase · Stripe · subscription and entitlement modeling

Quality & release: unit, widget and integration tests · Fastlane · GitHub Actions · Sentry · Crashlytics · code signing · App Store Connect · Google Play Console

Also: on-device ML (naive Bayes, ML Kit OCR) · camera and barcode scanning · maps and live location · biometrics · accessibility (WCAG) · AI-assisted development (Claude Code)

EDUCATION & LANGUAGES

B.Sc. in Computer Science & Engineering — Varendra University, Rajshahi, Bangladesh · 2013 – 2017 · Bangla (native) · English (professional working proficiency)
