Rajshahi, Bangladesh (UTC+6) • Remote • Works shifted hours for a Brazil-based team; available for US/UK/EU overlap • Available as an independent contractor

PROFILE

Senior mobile engineer with 11 years shipping production applications across Flutter, React Native, native Android, native iOS and native macOS. 50+ apps published to Google Play and the App Store reaching 1,000,000+ users, including platforms sustaining 100,000+ daily active users at a 4.7-star rating. Specialist in offline-first architecture and conflict-free data synchronisation — author of a published CRDT sync library and nine open-source packages on pub.dev under a verified publisher. Experienced team lead and sole owner of products from architecture through CI/CD, store release and post-launch maintenance.

TECHNICAL SKILLS

Cross-Platform: Flutter (7 yrs), Dart, React Native (3+ yrs), TypeScript, JavaScript, Expo and bare workflows, platform channels, native module bridging, custom plugin development, monorepo and multi-flavor/white-label builds

Native Android: Kotlin, Java, Jetpack Compose, XML layouts, Android SDK, Material Design, Gradle, Android Keystore, background services, push via FCM

Native iOS: Swift, SwiftUI, StoreKit 2, Keychain, APNs, App Store Connect, provisioning and code signing, Human Interface Guidelines

Native macOS: Swift, SwiftUI, AppKit, menu-bar and background agent apps, GRDB, EventKit, PDFKit, StoreKit 2 subscriptions, Mac App Store distribution, sandboxing and notarisation

Architecture & State: Clean Architecture, MVVM, MVC, layered UI/Domain/Data separation, dependency injection, BLoC, Cubit, Riverpod, Provider, Redux, Context API, repository and use-case patterns

Offline-First & Data: CRDT conflict-free replication, deterministic conflict resolution, background sync, local-first data layers, optimistic updates with rollback, SQLite (Drift, GRDB), Firestore offline persistence, caching strategies

Backend & APIs: Firebase (Firestore, Authentication, Cloud Functions, Crashlytics, Cloud Messaging), Supabase, PostgreSQL, REST API design and integration, JSON/XML handling, third-party SDK integration, webhooks

Security & Identity: OAuth2, JWT, token refresh strategies, biometric authentication (fingerprint/FaceID), secure local storage via Android Keystore and iOS Keychain, encrypted local data, in-app purchase and subscription security

Testing & Quality: Unit testing, widget testing, integration testing, end-to-end testing, test-driven development, structured code review, Firebase Crashlytics monitoring, regression tracking, performance profiling with DevTools

DevOps & Release: CI/CD pipeline design, Fastlane, GitHub Actions, Git and Git-flow review workflows, automated builds, staged rollouts, Google Play Console and App Store Connect release management, store compliance and review handling

Specialised: ARKit and ARCore integration, on-device voice recognition, computer vision (homography, registration-mark alignment), canvas and shader rendering, WCAG accessibility auditing, maps, routing and journey-planning data, payment integration (Pix, StoreKit 2 subscriptions), real-time messaging and push

AI-Assisted Engineering: Claude Code integrated into daily development and team workflow — spec-driven development, agent-assisted refactoring and test generation, with code review and test discipline maintained on all merged work

Leadership: Team leadership (6 developers), distributed and cross-time-zone collaboration, mentoring, code review standards, technical documentation, stakeholder and client communication, curriculum design and developer training

PROFESSIONAL EXPERIENCE

Senior Mobile Developer (Level III) — Developer eXperience Hub (Devxhub)

09/2023 – Present • Remote — Rajshahi, Bangladesh

- **Cross-platform architecture** — architected the mobile application layer in Flutter and React Native for enterprise FinTech and expense-management products serving 50K+ users, owning data flow, state management and release process end to end.
- **Offline-first engineering** — built a local/Firebase sync architecture that keeps core functionality fully available through network interruptions, with deterministic conflict resolution on reconnect.
- **DevOps** — designed and implemented the team CI/CD pipeline with Fastlane and GitHub Actions, substantially shortening release turnaround for a 4-developer team working across multiple time zones.
- **Quality** — reduced crash rates by introducing structured state management — BLoC and Riverpod in Flutter, Redux and Context in React Native — backed by Crashlytics monitoring and regression tracking.
- **Open source** — published 9 reusable packages covering CRDT sync, accessibility auditing, on-device voice, canvas rendering and UI tooling, reducing repeated implementation work across client projects.
- **Ownership** — team lead and sole developer on multiple client and in-house products — architecture, implementation, CI/CD, App Store and Play release, and post-launch maintenance. Delivered Tanto, a Brazilian corporate reimbursement platform integrating with SEFAZ state tax agencies for AI-based invoice token capture, policy validation and instant Pix payout; and Farenow, a multi-service super app for a US client (Houston, TX).
- **React Native delivery** — shipped client applications in React Native alongside Flutter — component architecture, Redux and Context state management, native module bridging to Kotlin and Swift, and store release on both platforms.

- **AI-assisted workflow** — integrated Claude Code into the team development process while maintaining code review and test discipline on all merged work.

Senior Mobile Application Developer — Prabartan Information Technology

06/2019 – 08/2023 · Remote — Rajshahi, Bangladesh

- **Scale** — led development of an offline-first, multi-language EdTech platform reaching 100,000+ students across 5 countries, engineered so lessons and progress remain fully available without connectivity.
- **Reliability** — sustained a 4.7-star store rating at 100,000+ daily active users by building the Firebase/SQLite synchronisation layer and resolving sync-conflict edge cases at scale.
- **Leadership** — managed a 6-developer team and modernised the stack, introducing Flutter 3.0, Jetpack Compose and SwiftUI alongside code review standards.

Android Application Developer — Blue Hills Information Technology

07/2015 – 05/2019 · On-site — Rajshahi, Bangladesh · Part-time alongside university through 04/2017, full-time thereafter

- **Native Android** — co-developed consumer Android applications in Java and Kotlin reaching 500,000+ downloads and a top-10 Education category ranking on Google Play.
- **Performance** — improved app launch time and reduced production defects through systematic profiling and the introduction of code review practices.

Guest Trainer, Mobile App Development (Contract) — NACTAR

2016 – 2024 · 2–3 sessions per year · Bogura, Bangladesh

- Designed and delivered mobile development curriculum to 200+ developers, with hands-on project mentorship aligned to Android and cross-platform certification standards.

OPEN SOURCE — PUBLISHED PACKAGES (PUB.DEV, VERIFIED PUBLISHER)

[flutter_crdt_sync_kit](#) — Offline-first, CRDT-based local data layer with automatic conflict-free merge and pluggable Supabase/REST backend adapters.

[flutter_a11y_lens](#) — Live accessibility auditor inspecting the running widget tree and flagging WCAG violations in real time via an on-screen debug overlay.

[local_voice](#) — Privacy-first, fully on-device voice command recognition — no cloud, no API keys, operates without network access.

[flutter_fabric](#) — Canvas library porting the Fabric.js interaction model to Flutter: selectable, draggable and rotatable objects, free drawing, JSON and SVG path support.

[flutter_liquid_glass_widgets](#) — UI kit implementing Apple's Liquid Glass design language with shader-powered blur, physics-based animation and dynamic lighting.

SELECTED PRODUCTION WORK

Hourwise — Native macOS Time-Tracking & Invoicing App [Mac App Store](#) · [Product site](#) — founder and sole engineer. Native menu-bar app (SwiftUI + AppKit, ~17k lines of Swift) that passively records billable work and turns it into invoices for solo and small-firm lawyers. Local-first SQLite/GRDB data layer with versioned migrations, backup and recovery — no account, no server, all data on device. On-device attribution combining a rule engine with a naive-Bayes classifier trained on user corrections, plus EventKit calendar import. PDFKit invoice generation with XLSX, CSV, QuickBooks/Xero and LEDES 1998B exporters, and StoreKit 2 subscriptions.

Tanto — Enterprise Reimbursement Platform (Brazil) — AI invoice-token capture validated against SEFAZ state tax agencies, policy checks and instant Pix reimbursement. Company closed Sept 2025; listings removed.

Farenow — Multi-Service Super App (US client, Houston TX) [iOS](#) · [Android](#) — ride-hailing with live tracking, on-demand services, food and grocery delivery, virtual consultations and marketplace listings in a single cross-platform app. Team lead and sole developer — architecture through store release.

Peace of Mind (POM) — Estate Planning App [iOS](#) · [Android](#) — cross-platform app with a solo-built native iOS layer: digital will management, biometric-locked vault, life timeline and StoreKit 2 subscriptions. Resolved subscription race conditions and led App Store submission and compliance.

[Prabartan Educational Platform](#) — suite of offline-capable learning apps including Learn Python (165+ tutorials, 100K+ installs) with structured lessons and progress sync.

[Forward SMS](#) — [SMS Forwarder](#) — forwards incoming SMS to email, Slack, Telegram and Discord in real time, with offline queuing and custom filter rules.

Also led and built solo, architecture through store release: Muslim Times Pro [iOS](#)·[Android](#) | Notivio [iOS](#)·[Android](#) | ProofSell [iOS](#)·[Android](#) | SK Mobile School [iOS](#)·[Android](#) | [eSIM247](#)

CURRENT BUILDS (GITHUB)

[OMR Scanner](#) — fully offline exam answer-sheet scanner using registration-mark alignment and homography rather than OCR, with grid calibration, live camera guide, auto-capture and instant per-roll scoring.

[Jatri](#) — [Bangladesh Transit App](#) — journey planner and ticketing app built on real MRT Line 6 and BRTA route data: search, route results, itinerary detail and ticket purchase flow.

[ar_measure](#) — cross-platform AR measurement plugin wrapping ARKit and ARCore through platform channels: place anchors, read live real-world distances and areas.

EDUCATION & LANGUAGES

B.Sc. in Computer Science & Engineering — Varendra University, Rajshahi, Bangladesh | 2013 - 2017

Bangla — native · English — professional working proficiency
